

Phosphate Buffered Saline plus Tween 20 (20x) pH 7.6

- Description:** Zeta Wash buffer formulations are an optimal formulation of pH stabilizers, salts and detergents designed to effectively remove excess material from the microtiter plate wells without disrupting the ELISA binding reaction. By maintaining the proper buffering environment, unbound components can be washed away without suppressing antigen-antibody binding interactions, thereby reducing nonspecific background and increasing the specific signal. Our Wash buffers do not contain hazardous preservatives such as Azide or Mercury that may interfere with antibody-antigen binding interactions. For your convenience wash buffer is offered in a wide variety of formulations to meet the needs of your specific ELISA application. This product can be customized to meet the specific needs of your assay. Inquire about custom vialing, labeling, kit assembly and drop shipping.
- Contents:** Phosphate buffered saline in reagent grade water. Tween 20 is added at a diluted concentration of 0.05%, NaCl: 0.133M, K₂HPO₄: 0.0086M, KH₂PO₄: 0.0015M. Final pH of diluted buffer is 7.6±0.05. This product is filtered to 0.2 microns.
- Uses/Limitations:** Not to be taken internally. For In-Vitro Diagnostic use. For professional use. Histological applications. Do not use if reagents become cloudy. Do not use past expiration date. Use caution when handling reagents. Non-Sterile.
- Precautions:** Avoid contact with skin and eyes.
Harmful if swallowed.
Follow all Federal, State, and local regulations regarding disposal.
