

# HPV (CAMVR-1 & C1P5)

## Mouse monoclonal Antibody

**Host:** Mouse

**Specificity:** Human

**Ig Class:** Store at 2-8°C for up to 2 years for concentrate form and 18 months for predilute form.

**Storage:**

**Specifications:** HPV (CAMVR-1 & C1P5) Mouse monoclonal primary antibody detects HPV protein in formalin-fixed, paraffin-embedded samples by immunohistochemical (IHC) staining.

Staining procedures: Use formalin-fixed and paraffin-embedded sections. Retrieval conditions: Pretreatment of deparaffinized samples via heat-induced epitope retrieval is recommended. Detection method: Polymer anti-mouse/rabbit Ig detection system. Working dilution: 1:100-200. Positive Control: sample known to contain HPV protein.

**Intended Use:** This antibody is intended for Analyte Specific Reagent (ASR) use only. HPV (CAMVR-1 & C1P5) Mouse monoclonal primary antibody is intended for laboratory use in the detection of adenovirus in formalin-fixed, paraffin-embedded tissue by immunohistochemical (IHC) staining. Qualified pathologists should interpret the staining results in conjunction with the patient's relevant clinical history.

**Description:** Human papilloma viruses (HPVs) can be classified as either high risk or low risk according to their association with cancer. HPV16 and HPV18 are the most common of the high-risk group while HPV6 and HPV11 are among the low risk types. Approximately 90% of cervical cancers contain HPV DNA of the high-risk types. Mutational analysis has shown that the E6 and E7 genes of the high-risk HPVs are necessary and sufficient for HPV transforming function. The antibody reacts very strongly with formalin-fixed, paraffin-embedded tissues containing HPV-16, -18 or -33.

**Supplied As:** Purified antibody in Tris-HCl pH 7.4 buffer containing stabilizing proteins (including < 1% Bovine Serum Albumin) and < 0.1% ProClin by volume.
