

Toxoplasma gondii (Poly)

Rabbit polyclonal polyclonal Antibody

Host: Rabbit polyclonal
Specificity: Human
Immunogen: Toxoplasma gondii
Ig Class: IgG
Storage: Store at 2-8°C for up to 2 years for concentrate form and 18 months for predilute form.

Specifications: Toxoplasma gondii (Poly) Rabbit polyclonal polyclonal primary antibody detects Toxoplasma gondii protein in formalin-fixed, paraffin-embedded samples by immunohistochemical (IHC) staining. Staining procedures: Use formalin-fixed and paraffin-embedded sections. Retrieval conditions: Pretreatment of deparaffinized samples via heat-induced epitope retrieval is recommended. Detection method: Polymer anti-mouse/rabbit Ig detection system. Working dilution: 1:10-30. Positive Control: sample known to contain Toxoplasma gondii protein. Localization: Organisms.

Intended Use: This antibody is intended for Analyte Specific Reagent (ASR) use only. Toxoplasma gondii (Poly) Rabbit polyclonal polyclonal primary antibody is intended for laboratory use in the detection of adenovirus in formalin-fixed, paraffin-embedded tissue by immunohistochemical (IHC) staining. Qualified pathologists should interpret the staining results in conjunction with the patient's relevant clinical history.

Description: Toxoplasma gondii, a single-celled parasite, causes the disease toxoplasmosis. The life cycle of Toxoplasma gondii includes two phases: the intestinal (or enteroepithelial) and extraintestinal phases. The intestinal phase produces oocysts and occurs only in wild and domesticated cats. The extra-intestinal phase occurs in all infected animals and produces tachyzoites (actively proliferating trophozoites) and, eventually, bradyzoites (slowly growing trophozoites) or zoitocysts. Toxoplasma gondii infects tissue of the gastrointestinal tract, brain and lung in immunocompromised patients.

Supplied As: Purified antibody in Tris-HCl pH 7.4 buffer containing stabilizing proteins (including < 1% Bovine Serum Albumin) and < 0.1% ProClin by volume.
